

StandUp® Premium Soy Starter w/ MIC

Your potential for a high yield begins when the seed hits the ground. With PCT | Sunrise® StandUp® Premium Soy Starter w/ MIC, your soybeans will get an in-furrow starter fertilizer that includes micronutrients to stimulate germination, increase nodule development and produce a more consistent emergence.

StandUp Premium Soy Starter w/ MIC contains manganese to stimulate germination and a unique, proprietary microorganism blend to improve root hair development that ultimately leads to increased nodule formation. An abundant amount of nodules increases nitrogen fixation so your soybeans produce more protein and more yield.

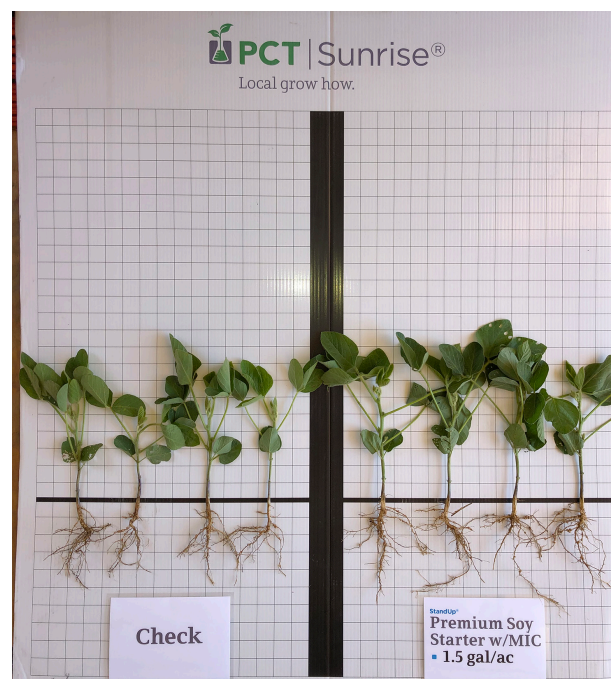

The high levels of potassium – a critical nutrient for soybean plants — Premium Soy Starter w/ MIC improves drought tolerance and increases resistance to pest and disease. Providing your soybeans with additional potassium is a key benefit, especially in midwestern states where widespread sampling has shown declining potassium levels in soils in recent years.

Soybean plants also need an adequate supply of nitrogen, which aids in early-season photosynthesis and protein production. Premium Soy Starter w/ MIC has been enhanced with triple the nitrogen to promote rapid growth, enhance foliage development and diminish plant yellowing.

At 100 percent orthophosphorus, Premium Soy Starter w/ MIC provides young plants with an immediate source of nutrition, while its monopotassium phosphate stimulates the plant's immune system.

The PCT | Sunrise team of agronomists and chemists continually research, test and create their own precise blends to ensure current nutrient needs are being met. The PCT planter conversion team also will outfit your planter to ensure your soybean starter is on target to immediately feed your seed.

StandUp Premium Soy Starter w/ MIC is the first step in a PCT systems approach that includes a foliar and finisher placed during specific plant development periods to grow fields of opportunity.

Premium Soy Starter w/ MIC Traits

- Manganese
 - ↳ stimulates germination
- Unique proprietary microorganisms
 - ↳ increase nodule development and nutrient uptake
- Plant growth promoting rhizobacteria
 - ↳ stimulate plant development
- High potassium
 - ↳ promotes root development, improves drought tolerance
- 100 percent orthophosphorus
 - ↳ a nutrient immediately available to young plants
- Monopotassium phosphate
 - ↳ stimulates immune system
- Low salt content
 - ↳ safe for in-furrow application

Enhanced Traits

- Triple nitrogen
 - ↳ aids in photosynthesis, promotes healthy foliage

Premium Soy Starter w/ MIC

Key Ingredients

Nitrogen	3%
Phosphorus	16%
Potassium	18%
Manganese	0.2%

Usage Rate

- ↳ 1-3 gal/acre
- Plant growth regulators can be added.*

	Micronutrients, plant health boosters, germination and growth stimulators, beneficial microbes	Lower salt, N-P-K base with more immediately-available phosphorus, Nutrol to boost plant health
