# AdjuTec® TerraTrate

## Spray application deposition aid with drift reduction technology.

PCT | Sunrise® AdjuTec® TerraTrate is formulated with a superior surfactant system and paraffinic oil to improve deposition and penetration of the active ingredient or nutrients into the target surface.

Application of soil-applied herbicides with TerraTrate will lay the foundation for effective preemergent weed control.

TerraTrate is a soil and spray deposition agent that improves the efficacy and adsorption of soil applied herbicides, improves drift control, and enhances application efficiency. With a TerraTrate application, you get proven quality and performance that can improve results from your herbicide inputs.

AdjuTec TerraTrate promotes efficacy by increasing soil adsorption which can help to reduce run-off and leaching of the spray application.

AdjuTec TerraTrate is recommended for application in a broad range of crop and non-crop uses including agriculture, turf and ornamental, industrial vegetation management, and specialty crops.

May be used with herbicides, fungicides, or insecticides.

### Advantages of TerraTrate:

- ↳ Improves pre-emergent weed control
- ↳ Reduces evaporation and drift
- ↳ Keeps active ingredient in the weed kill-zone longer

### Usage Rate & Application Directions:

- ↳ For ground applications, with ground applied pesticides:
  - 1-4 pt/A in 5-30 gal of spray
- ↳ For aerial applications:
  - 6-16 oz/A
  - A minimum of 1.0% by volume is recommended for aerial and low volume spray applications
- ↳ Driftable Fine Minimization:
  - For all applications – a minimum of 1.0% by volume (or 1 gal/100 gal of spray mix) must be used.

**NOTE: The above use recommendations are considered to be adequate for most uses. Some pesticides, however, may require higher or lower rates for optimum effect. Follow the pesticide label directions when this occurs.**

### Package Size:

- ↳ 2 x 2.5 gal
