

StandUp[®] Fertizol[®] EZ

Granular micronutrient blend enhanced with the Fertizol[®] chelate

PCT | Sunrise[®] Fertizol[®] EZ, is a Fertizol[®] enhanced, granular micronutrient blend for mixing with dry fertilizer. The patented chelate is infused into the granule boosting micronutrient fertility and availability. The chelate works in the soil and on the fertilizer, increasing micronutrient and phosphorus availability in the soil solution.

Fertizol EZ stops micronutrients from binding to fertilizer or to the soil. This keeps more phosphorus free for uptake and increases the overall efficiency of nutrient uptake into the plant, resulting in healthier plants and better yield. Fertizol EZ offers a dry, easy-to-mix blend when impregnation is not an option. Fertizol EZ contains calcium, manganese, molybdenum, sulfur and zinc, which are essential micronutrients that are evenly distributed in fertilizer mixes.

Advantages of Fertizol EZ

- ↳ Contains the strongest and most agronomically proven chelate on the market
- ↳ Chelation prevents phosphorus from locking up micronutrients, creating more nutrition that plants can access
- ↳ Easy-to-use granular blend mixes evenly with dry fertilizer

Active Ingredients

↳ Calcium (Ca).....	4.00%
↳ Sulfur (S).....	6.00%
↳ Manganese (Mn).....	4.00%
↳ Molybdenum (Mo).....	0.005%
↳ Zinc (Zn).....	8.00%

Derived from: calcium sulfate, manganese oxide, manganese sulfate, molybdic oxide, zinc oxide, zinc sulfate, zinc EDDHA.

Application and Compatibility

- ↳ Apply 5-10 lb/A with fertilizer for cropping programs that could benefit from additional nutrient availability
- ↳ Fertizol EZ is effective in both fall and spring broadcast and in-furrow fertilizer applications.
- ↳ **Compatibility:**
 - Fertizol EZ can be easily mixed with dry fertilizer applications.

Package Size

- ↳ Bulk
- ↳ 2,000 lb supersack
