# StandUp®

Fertizol™

**Makes phosphorus, zinc and other key micronutrients more available to the plant.**

**Has three modes of action: it unlocks the nutrients in the soil, it makes the nutrients that it is applied with more available, and it is mobile in the plant for season-long activity.**

**The most scientifically proven and only patent pending chelating agent in the industry.**

Fertizol™ is a first-of-its-kind chelate that can be added directly to starter fertilizer. Fertizol makes the nutrients in your starter as well as the nutrients in your soil more available.

Soil extraction studies demonstrate up to a 36% increase in the amount of available phosphorus when Fertizol is applied with a starter fertilizer combination. The same study showed an even higher percentage for micronutrients like Iron, Zinc, Manganese, and Copper. Enhanced nutrient availability increases early growth, overall plant health, and ultimately yield.

### COMPATIBILITY

Fertizol can be blended with most primary, secondary, or micronutrients as well as crop protection products. Add Fertizol to liquid fertilizer and agitate until thoroughly mixed. In the absence of published information, check compatibility by performing a jar test with each new fertilizer type and batch prior to mixing. Mix only the amount of Fertizol with starter fertilizer that can be used within a day.

### APPLICATION DIRECTIONS

- For use as or with an in-furrow starter fertilizer
- Apply 1-2 quarts per acre alone or added to an existing phosphorus-based in-furrow starter fertilizer program for corn, dry bean, soybean, or any other crop that could benefit from additional nutrient accessibility from starter fertilizer.

### PACKAGE SIZE

- 2x2.5 gal
- 250 gal

### MINIMUM STORAGE TEMPERATURE

- Fertizol will freeze at 32°F. If allowed to freeze, thaw completely prior to use.
